

Inca – 3 Iron Supplement

Inca 3-Iron is a concentrated, safe, palatable and effective mixture of iron in 3 forms: covalent, coordinate and chelated, in a syrup base. Also contains copper, cobalt and manganese, which are effective adjuvants in the formulation of haemoglobin in the blood. 3-Iron contains a higher than usual quantity of total iron, so that adequate amounts are provided in the dose rates recommended.

3-Iron is for the treatment of anaemia caused by internal parasites, training and racing stress and nutritional imbalances.

The 2 most important factors in anaemia are the total number of red blood cells in the blood, and their content of haemoglobin. Treatment should aim at increasing both to their optimum level.

An important feature of 3-Iron is the inclusion of manganese which has an important relationship with the absorption of dietary iron.

Composition:

Total Iron: 16g/L

Ferric Ammonium Citrate: 71g/L

Ferrous Gluconate: 4g/L

Sodium Iron Edetate: 2g/L

Cobaltous Sulphate Monohydrate: 1mg/L

Copper Sulphate (Pentahydrate): 59mg/mL

Manganese Sulphate (Tetrahydrate): 46mg/L
