

## **Biolac – Puppy Milk Powder**

Biolac is a high protein, high energy milk replacer with all the required nutrition to promote healthy growth in puppies.

Puppies as young as 12 hours old have shown excellent results on Biolac. Growth and weight gains have been consistent with normal growth patterns.

### **FEED RATES**

To make 1 litre take 1.5 cups (200 grams) and put into a suitable container, add a small amount of warm water and mix into a thick paste, then add more warm water to make 1 litre of milk by shaking well in a large container or by using a hand blending machine.

### **SINGLE ANIMAL USE**

Take three well-heaped standard teaspoons or two scoops and mix into a paste then add more water to make up 100ml. Weigh the animal and feed 15-20% of body weight per day over 4 or 5 feeds.

### **IMPORTANT**

The milk volume required by young animals will vary depending on the species of animal and the energy density of the milk provided. BIOLAC produces considerable energy at 450 kj/100ml.

### **DO NOT OVERFEED!**

15-20% of body weight per day is adequate. Only dilute the mixture if constipation occurs.

### **FEEDING GUIDELINE**

Weight in grams	Volume in ml
100	15
200	30
300	45
400	60
500	75
600	90
700	105
800	120

900 135

1000 150

**BIOLAC** Contains no maltodextrins, sucrose or soy products and has an excellent amino acid profile. The high total solid content controls diarrhoea. If required for older animals add 2ml of canola oil to each 100ml to lift the total energy and total solids. If constipation occurs or the animal appears dehydrated, add an extra 100ml of water.

Protein.....6%

Carbohydrates.....4%

Lipid (Flat).....7%

Ash, Vitamins and Minerals.....3%

Total solids per litre.....20%

Energy.....2224kj/100g of powder - 450kj/100ml of reconstituted milk
