

Joint Guard for Dogs

Long term treatment with Joint Guard may help reduce non-infectious joint inflammation

COMPOSITION

Each 2.5 g of **JOINT GUARD** Powder for dogs contains:

Glucosamine Hydrochloride 500 mg

Purified Sodium Chondroitin Sulphate 400 mg

Also contains MSM, manganese gluconate, calcium ascorbate (Vit C), zinc, copper, vitamin E

ACTIONS

See Joint Guard for Cats for actions.

INDICATIONS

Long term treatment with Joint Guard may help reduce non-infectious joint inflammation

DOSAGE AND ADMINISTRATION

JOINT GUARD for Dogs is given daily with each meal, dosed according to weight. It can be given to young animals at a low daily maintenance dose for a regular protective effect, or at a higher daily dose for animals experiencing existing cartilage damage:

Animal Weight	Joint Guard® Dose			
	Initial 4 - 6 weeks		Maintenance	
	Powder	Chews	Powder	Chews
5 - 10kg	½ scoop daily	2 chews daily	¼ scoop daily	1 chew daily
11 - 22kg	1 scoop daily	4 chews daily	½ scoop daily	2 chews daily
23 - 44kg	1½ scoops daily	6 chews daily	1 scoop daily	4 chews daily
Over 45kg	2 scoops daily	8 chews daily	1½ scoops daily	6 chews daily

It is necessary to initiate treatment at double the maintenance dose in order to "load up" the body with therapeutic levels of the active ingredients, generally for the first 4 - 6 weeks. At this point, the dose can gradually be reduced over time to find the lowest possible amount that will keep the dog comfortable.

JOINT GUARD for Dogs may provide a joint protective effect when used alone as a daily dose, and is a very useful adjuvant therapy for existing joint damage when used in combination with the Veterinary Prescription Only drug, Pentosan 100 (injections) to further stimulate joint repair.

PRESENTATION

Powder for in-feed use - 200 g, 400 g, 750 g

Liver Chews - 250 g (approx 120 individual chews)

STORAGE

Store in a dry area below 30 °C (Room Temperature). Replace lid tightly after use. Protect from moisture.
