

FERROMAX

Oral iron with Folic acid

What's In It?

FERROMAX is an oral organic iron 12.5g/L and folic acid 265mg/L supplement in a sweet syrup base, formulated specifically for greyhounds to maximise red blood cell production and oxygen carrying capacity of blood. Daily supplementation of folic acid significantly increases serum haemoglobin levels.

What Does It Do?

Iron and folic acid are key elements in the maintenance of high blood haemoglobin levels. A greyhound diet is often deficient in iron and folate, and injury or worm infestation can seriously deplete haemoglobin levels, as can the stress of training and racing. Adequate haemoglobin levels mean good red blood cell counts, maximum oxygen transfer and performance. Organic iron complexes do not denature vitamins and are highly bioavailable.

How Do I Use It?

Add 3mL FERROMAX to the feed daily for first 6 weeks of training, then reduce to 3mL every second day for maintenance. During recovery from illness, injury or parasitism use 3mL daily. Folic acid is particularly important for pregnant bitches to ensure correct foetal development.

How Is It Packed?

FERROMAX is available in 1 and 5 litre packs.
