

FOLIPHOS

FOLIPHOS is an injectable phosphorus, folic acid and Vitamin B12 supplement for racing greyhounds

What's In It?

Each ml supplies Butafosfan 100mg, Folic Acid 2mg and Hydroxocobalamin acetate 0.05mg.

What Does It Do?

FOLIPHOS provides readily available phosphorus for muscle energy production, plus folic acid and vitamin B12 for optimum red blood cell production. By improving high energy phosphorus levels, **FOLIPHOS maximises muscle power**. The folic acid and vitamin B12 are essential for red blood cell production. FOLIPHOS also acts to maintain appetite in stressed dogs. Deficiency of phosphorus, folic acid or vitamin B12 can all lead to a significant loss of performance, stamina and muscle efficiency.

How Do I Use It?

Administer by intravenous, intramuscular, or subcutaneous injection. Give small dogs 0.5 to 2mL, larger dogs 0.5 to 5mL

How Is It Packed?

100mL multidose bottle for sterile injection.
