

MUSCLE-G

The complete muscle performance and repair package

What's In It?

Ranvet MUSCLE-G provides the complete package of nutrients essential to maximum muscle performance. Specifically formulated for performance greyhounds to prevent muscle damage, stiffness, soreness, muscle fatigue and cramping, and to improve recovery. MUSCLE-G provides a blend of organic selenium, Vitamin E, plus Thiamine and Vitamin C to ensure optimum muscle health and nutrition.

What Does It Do?

MUSCLE-G maintains healthy muscles by significantly reducing muscle damage from the free radicals produced during all hard exercise. Selenium & Vitamin E are two major antioxidants – selenium protecting the muscle cells, and Vitamin E protecting cell membranes. MUSCLE-G provides a very high level of Vitamin E (100mg per 4g dose). Thiamine enhances energy production and liver function. Vitamin C is a potent antioxidant.

How Do I Use It?

Give MUSCLE-G daily by mixing thoroughly in feed. Avoid mixing with iron supplements. Greyhounds in work should receive 1-2 measures, dogs at stud and pregnant bitches receive 1-4 measures, and pups receive 1-2 measures daily in feed. Spelling greyhounds should receive 1 measure daily. One level measure provides 4g.

Tip: Double the dose for 2-3 days prior to racing or hard workout to ensure maximum antioxidant nutrient supply to allow dogs to cope with the oxidative stress imposed by racing, and improve recovery.

How Is It Packed?

600g and 4kg packs.
