

# SALKA-LITE

## Essential salts with B-Group Vitamins, Vitamin E and Vitamin C

### *What's In It?*

Specifically formulated for greyhounds, SALKA-LITE supplements levels of the essential electrolytes including sodium, potassium, magnesium and chloride, to meet the increased requirements of athletic dogs. SALKA-LITE also provides essential Vitamins E, C, B1, B2, B6 and nicotinamide, because adequate levels of these essential energy conversion and antioxidant vitamins are often not available in the diet.

### *What Does It Do?*

SALKA-LITE supplements the critical nutrients required to maintain fluid balance and energy conversion processes, to maximise performance in all conditions. Adequate levels are often not available from the diet alone. Dehydration in greyhounds resulting from training, barking, panting, nervousness as well as hot weather increases their daily requirements for electrolytes. Supplementing Salka-Lite helps meet these increased levels.

### *How Do I Use It?*

Give one 4gm scoop (provided) twice daily into food morning and night.

### *How Is It Packed?*

SALKA-LITE is available in 600g and 1.6kg packs.
