

# SPRINT OIL

## High Energy Omega 3 and Omega 6 fatty acids

### *What's In It?*

Specifically formulated for racing greyhounds, Sprint Oil contains Omega 3 Linolenic acid 107mL/L and Omega 6 Linoleic acid 426Mg/L in a palatable liquid. Each litre provides 33.1MJ digestible energy.

### *What Does It Do?*

The Omega 3 and 6 essential fatty acids provide 2.5 times the amount of available energy as an equivalent amount of glycogen. While providing readily usable energy, the Omega 3 & 6 fatty acids also provide an anti-inflammatory function and maintain excellent skin and coat condition. Supplementing with Sprint Oil and L-Carnitine makes fats more available for energy production, reduces muscle fatigue, cramping and improves race performance.

### *How Do I Use It?*

Either mix through the evening feed or dose directly into the mouth. It is likely to take at least 4-6 weeks for a dog to fully adjust to and utilise oil in the diet. It is recommended that increases in dosage are conducted slowly over 5-7 days to allow adaptation to high fat diets. Use Sprint Oil in combination with L-Carnitine oral paste. Give 1-2 tablespoons (20-40mL) daily. This can be increased safely by 50% as necessary if dogs are on lean meat diets low in fats.

### *How Is It Packed?*

Sprint Oil is available in 1, 5 and 20 litre packs.
