

BETA-CEL®

DAILY ELECTROLYTE SUPPLEMENT FOR GREYHOUNDS

Beta-Cel is a daily electrolyte supplement specifically designed for greyhounds. Training, travelling and panting deplete electrolytes each day, particularly during the hotter months. Electrolyte deficiencies may lead to dehydration, cramping, poor performance and nervousness.

WHAT IS BETA-CEL?

An electrolyte replacer that:

- ✓ Prevents electrolyte deficiencies
- ✓ Counters the stress of training, racing and travelling
- ✓ Assists in buffering muscle acidosis and contains glucose for energy
- ✓ Specifically formulated for greyhounds

Available in 350g, 1kg and 2kg tubs

WHY CHOOSE BETA-CEL?

Prevents electrolyte deficiencies that may lead to dehydration, cramping, poor performance and nervousness

Common greyhound diets may not contain sufficient electrolytes (body salts) to meet the needs of racing greyhounds. Training, travelling and panting deplete electrolytes each day, particularly during hotter months. BETA-CEL added to food can prevent electrolyte deficiencies.

BETA-CEL contains a range of different salts including chloride, magnesium and potassium in the

optimal amounts to meet the needs of the working dog. BETA-CEL also contains glucose to aid in the absorption of salts from the gut, plus lactate and citrate salts which help buffer muscle acidosis.

WHEN TO USE BETA-CEL

BETA-CEL is recommended as the **base** electrolyte supplement in the greyhound's diet, to which other electrolyte formulations such as Beta-K®, Neutradox® or Recharge can be added to meet specific needs or aid in recovery from travelling or racing. Routine **daily** dosage is 3g (1 level teaspoon measure) in the morning or evening meal.

BETA-CEL®

DAILY ELECTROLYTE SUPPLEMENT FOR GREYHOUNDS

WHY DO I NEED TO FEED A DAILY ELECTROLYTE SUPPLEMENT SPECIFICALLY FORMULATED FOR GREYHOUNDS?

As greyhounds do not sweat to get cool, (in contrast to horses), electrolytes formulated with high levels of sodium to replace sweat losses in horses are not suited to greyhounds. Greyhounds have a greater need for potassium salt rather than sodium, as potassium is the main electrolyte depleted by panting.

Greyhounds also benefit from an effective, indirect muscle acid buffer such as lactate and citrate (which are both in Beta-Cel), rather than bicarbonate as used in many cheap electrolytes for horses.

QUICK REFERENCE GUIDE

INDICATIONS:

- As an aid to replace and treat electrolyte loss and prevent dehydration in greyhounds.

RECOMMENDED FOR:

- Racing/travelling greyhounds
- Working dogs
- Dehydrated dogs
- Brood bitches

PRESENTATION:

- 350g, 1kg, 2kg tubs

COMPOSITION:

- Each 3g scoop of BETA-CEL contains:

Potassium	525mg
Sodium	183mg
Chloride	717mg
Calcium	140mg
Magnesium	9.3mg
Citrate	71mg
Lactate	621mg
Sulfate	36.6mg
Glucose 420mg	420mg

DOSAGE & DIRECTIONS:

- Place 3g of Beta-Cel powder on the morning or evening meal. Alternatively, the 3g may be dissolved in 500ml of drinking water. In hot weather or tropical climates this dose may be increased to 6g.
- When adding dry powder to food, ensure adequate supply of clean drinking water is available at all times.
