

CALCI-D®

ESSENTIAL CALCIUM SUPPLEMENT FOR BONE BUILDING AND STRENGTH

Calci-D is formulated to correct the imbalance of calcium and phosphorus in meat added to the diet. The product is given at a calculated dose rate in direct proportion to the amount of meat in the diet.

WHAT IS CALCI-D?

- ✓ Corrects the imbalance of calcium and phosphorus in meat-based diets
- ✓ Helps to strengthen bones
- ✓ Palatable cheese flavour
- ✓ Ideal for pregnant bitches
- ✓ Liquid form ideal for puppies

WHY CHOOSE CALCI-D?

Complete bone building package.

CALCI-D is a calcium supplement with vitamins A and D which are essential for calcium uptake and bone strengthening. The two forms of calcium provided by CALCI-D assist in the growth and maintenance of healthy bones, teeth, nervous system, muscle function, blood clotting and cardiac regulation.

Especially formulated for greyhounds.

CALCI-D is formulated especially for greyhounds fed on traditional meat based diets. These diets typically contain lower inadequate levels of calcium, as well as Vitamins A and D and other bone forming nutrients essential to maintain a strong muscular skeletal system.

*Calci-D powder is available in
850g & 4mg containers*

Calci-D liquid is available in 1L bottles

Vitamins A and D play a role in the development and maintenance of healthy bones while Vitamin A is also essential for maintaining healthy vision and skin.

WHEN TO USE CALCI-D

Meats are very deficient in calcium (12mg/100g) and higher in phosphorus (160mg/100g), whereas the diet should contain a ratio of 1.2 - 1.4 parts calcium to 1.0 part phosphorus. The addition of the recommended amount of Calci-D in direct proportion to the **weight** of meat in the diet will provide an optimum 1.35 parts calcium to 1.0 part phosphorus ratio.

The label contains full instructions for supplementation of the diets for all types of greyhounds.

CALCI-D®

ESSENTIAL CALCIUM SUPPLEMENT FOR BONE BUILDING AND STRENGTH

WHY DOES MY GREYHOUND NEED A CALCIUM SUPPLEMENT?

A supplement such as CALCI-D may be needed as meat-based diets are often low or imbalanced in calcium, phosphorus and Vitamins A and D, which are essential for skeletal development and strength.

Adequate calcium is vital to maintain the strength and maturation rate of bones in a racing greyhound, and to enable remodelling of bones in young greyhounds galloped on circle tracks.

INDICATIONS:

- Calcium, Vitamin A and D Supplement to correct deficiencies and imbalances in the dietary calcium to phosphorus ratio in growing, racing, and breeding greyhounds on meat, and/or dry food diets.

RECOMMENDED FOR:

- Dogs in work
- Growing puppies & young dogs
- Pregnant & nursing bitches

PRESENTATION:

- 850g, 4kg and 1L liquid

COMPOSITION:

- 1g of CALCI-D powder contains:

Calcium	308mg
Phosphorus	36mg
Vitamin A	42mg
Vitamin D ₃	0.25mg

- 5mL of CALCI-D liquid contains:

Calcium	308mg
Phosphorus	36mg
Vitamin A	15.2mg
Vitamin D ₃	0.05mg

DOSAGE & DIRECTIONS:

CALCI-D POWDER

- Sprinkle CALCI-D over the meal once daily.

	Total Dose CALCI-D Daily	
	100% Dry Food	Meat
Adult Greyhounds (Resting) Pregnant Bitches (first 6 weeks)	---	1g/100g (1 scoopful per 500g)
Racing Greyhounds Pregnant Bitches (last 3 weeks) Young Greyhounds - Education	2.5g	2.5g/200g (1 scoopful per 400g)
Growing Greyhounds	1g/10kg bodyweight	1g/100g (1 scoopful per 500g)
Lactating Bitches	5g	2.5g/150g (1 scoopful per 300g)

CALCI-D LIQUID

- Shake bottle once then pour a dose over the meal once daily.

	Total Dose CALCI-D LIQUID Daily (based on 30kg adult weight)	
	100% Dry Food	Meat (Fresh, thawed, raw)
Adult Dogs / Greyhounds (Resting) Pregnant Bitches (first 6 weeks)	---	5mL/100g
Racing Greyhounds Pregnant Bitches (last 3 weeks) Young Greyhounds - Education	12.5g	12.5mL/200g
Growing Puppies	2.5mL/5kg bodyweight	5mL/100g
Lactating Bitches	5mL/6kg bodyweight	12.5mL/150g

- Weigh meat portion to calculate daily dose of CALCI-D LIQUID. The total daily dose may be divided between meals. Adjust dose to changes in quantity of meat fed.
