

IRONCYCLEN®

IRON AND ESSENTIAL CO-FACTORS

Ironcyclen liquid provides a source of iron and blood-building co-factors copper and cobalt, the three principal minerals for red blood cell and haemoglobin production. It is a syrup, with sugar as a carrier, which ensures optimum absorption of its iron content.

WHAT IS IRONCYCLEN?

- ✓ Contains chelated iron that is easily absorbed
- ✓ Contains blood building co-factors
- ✓ Helps improve oxygen carrying capacity of the blood
- ✓ Suitable for red blood cell production and haemoglobin formation
- ✓ Ideal for greyhounds recovering from illness, injury or blood loss

WHY CHOOSE IRONCYCLEN?

Contains chelated iron aminoates

Iron is the principal mineral in blood cell and haemoglobin production and oxygen (aerobic) enzymes. IRONCYCLEN boosts low iron levels in dogs that consume chicken/fish or dry food diets.

The iron in IRONCYCLEN is an easily absorbed form of iron and kind to your dog's stomach.

Available in 1L, 5L and 20L containers

Contains blood building co-factors

IRONCYCLEN contains copper and cobalt (blood building co-factors) which are essential for red blood cell and haemoglobin production.

WHEN TO USE IRONCYCLEN

Ironcyclen liquid (4mL daily) is routinely recommended to provide the essential minerals for blood production in racing greyhounds. This is especially beneficial during the first 4-6 weeks that a greyhound is brought into a training kennel and exercised on a daily basis to prepare it for racing.

IRONCYCLEN®

IRON AND ESSENTIAL CO-FACTORS

WHY DOES MY GREYHOUND NEED AN IRON SUPPLEMENT?

Worms, fleas, stress and hard exercise can increase the dog's demand for blood building minerals.

Inadequate intake of blood building minerals, iron, copper and cobalt, can result in anaemia, fatigue, reduced stamina and poor performance.

IRONCYCLEN liquid contains three organic forms of iron together with the blood building co-factors copper and cobalt, which are essential for red blood cell and haemoglobin production.

QUICK REFERENCE GUIDE

INDICATIONS:

- Ironcyclen liquid contains iron, copper and cobalt to supplement diets which may be deficient in these essential minerals. Racing, training, and other forms of hard exercise increase the requirement for iron.

RECOMMENDED FOR:

- All dogs in work
- Dogs recovering from illness
- Red blood cell production
- Haemoglobin formation
- Helps improve oxygen carrying capacity of the blood

PRESENTATION:

- 1L, 5L and 20L containers (Please Note: 5L and 20L containers have a picture of a horse on them but are safe to use in greyhounds).

COMPOSITION:

- Each 4mL dose contains:

Iron	34mg
Cobalt	16µg
Copper	60µg

DOSAGE & DIRECTIONS:

- 4mL daily in feed or as directed by a veterinary surgeon

IRONCYCLEN®
