

RECHARGE

SPORTS DRINK FOR GREYHOUNDS

Recharge for greyhounds is one of the most popular greyhound specific products worldwide. The name "Recharge" applies to a product that rapidly replenishes electrolytes and fluids after travelling and racing. The product lives up to its name in providing a rapid restoration of fluid and vitality after stress periods.

WHAT IS RECHARGE ?

- ✓ Rapidly replenishes electrolytes and fluids lost during racing, travelling and stressful conditions
- ✓ Rapid restoration of vitality
- ✓ Easy to use liquid – just add to drinking water
- ✓ Use in hot weather
- ✓ Palatable cheese flavour

WHY CHOOSE RECHARGE ?

RECHARGE provides a rapid restoration of electrolytes as a “sports” drink for greyhounds. The formulation is specifically matched to the needs of greyhounds as it contains a high potassium to sodium ratio, which is important for nerve and muscle function. RECHARGE Greyhound also contains Citrate Salt as a buffering agent and Glucose to enhance rapid uptake of electrolytes.

Available in 500mL and 1L chamber measuring packs

As a liquid supplement, RECHARGE is particularly useful in avoiding dehydration in dogs in hot weather as it combats electrolyte loss immediately. RECHARGE is very easy to use. Recharge can be used anytime, anywhere. There is no need to wait until the dog has consumed a meal. It comes in a handy portable pack to administer at events.

RECHARGE

SPORTS DRINK FOR GREYHOUNDS

WHY DOES MY GREYHOUND NEED A ORAL REHYDRATION CONCENTRATE?

It is common for greyhounds to lose large quantities of fluid and electrolytes during travelling, racing, and stressful conditions due to excessive panting. Unless these losses are replaced rapidly,

dehydration, muscle cramping, loss of performance and nervousness can occur. Recharge replenishes and restores fluid rapidly.

QUICK REFERENCE GUIDE

INDICATIONS:

- As an aid in restoring fluid and electrolyte levels depleted by training, travelling, racing and hot weather. Aids rapid recovery from fatigue and dehydration.

RECOMMENDED FOR:

- Racing/travelling greyhounds
- Working dogs
- Nursing bitches
- Dehydrated dogs, due to illness or heat stress

PRESENTATION:

- 500mL and 1L

COMPOSITION:

- 5mL of RECHARGE contains:

Sodium	0.14g
Potassium	0.15g
Chloride	0.22g
Phosphate	0.09g
Citrate	0.06g
Magnesium	0.02g
Sulfate	0.06g
Glucose	1.3g

DOSAGE & DIRECTIONS:

- Ensure an adequate supply of clean, cool, fresh drinking water is available after offering RECHARGE drink.
- The RECHARGE concentrate should be diluted with clean, fresh drinking water as directed. The diluted drink should be offered as the first drink during cooling down from exercise.
- **Before Racing:** Mix 5mL into 125mL (1/2 cupful) of cool, clean water, and offer as a drink after travelling prior to kennelling. Estimate the weight loss and offer sufficient to satisfy the greyhound's thirst, but take care to avoid exceeding the greyhound's racing weight range.
- **After Racing:** Mix 10mL into 250mL (1 cupful) of cool, clean water, and offer as a drink during the cooling down period. Provide a bowl of fresh, cool water in conjunction with the RECHARGE drink in the kennel.
- **Hot weather/Nursing Bitches:** A bulk solution can be prepared and offered as an alternative drink in conjunction with fresh water. Mix at the rate of 40mL/litre water. Portion out to each greyhound as required, in addition to a bowl of fresh water. Bulk solution may be refrigerated. Mix fresh solution each day.
