

# WHITE-E®

A NATURAL ANTI-OXIDANT

White-E has become the commonly used name for Vitamin E with Australian greyhound trainers. White-E contains a pure source of naturally derived Vitamin E, the most powerful source of Vitamin E available. The main effect of White-E is as an anti-oxidant used naturally in the body to maintain muscle function and contraction power.

---

## WHAT IS WHITE-E?

---

- ✓ Pure source of Vitamin E
- ✓ Natural anti-oxidant
- ✓ Vital for the immune system
- ✓ Use to improve fertility
- ✓ Maintains muscle function and stamina
- ✓ Proven product with over 30 years on the market

*Available in 160g, 500g, 1.5kg and 8kg packs*

---

## WHY CHOOSE WHITE-E?

---

### WHITE-E is a natural anti-oxidant

During intense training and hard exercise, harmful “free radicals” can build up in the muscle and tissue cells. “Free radicals” are unstable molecules that are capable of damaging tissues in the body. WHITE-E acts as a natural anti-oxidant to prevent ‘free radicals’ from building up.

### Naturally derived Vitamin E

The Vitamin E in WHITE-E has better absorption into the body and a longer effect than synthetic Vitamin E.

WHITE-E will also help **with the function and strengthening of the immune system**, as well as **improving fertility in bitches** and in male dogs.

Greyhounds deficient in Vitamin E will show signs of muscle weakness, lack of stamina, lowered fertility in both bitches and male dogs, reduced immune response to infections, skin disorders and heart muscle degeneration.

# WHITE-E®

A NATURAL ANTI-OXIDANT

## WHY DOES MY GREYHOUND NEED A VITAMIN E SUPPLEMENT?

The main effect of Vitamin E is as an antioxidant used naturally in the body to maintain muscle function and contraction power. Vitamin E is also vital for the functioning of the immune system and for maintaining fertility.

WHITE-E is effective in maintaining stamina, staying ability and performance and is suitable for nervy greyhounds, those prone to cramping, for muscle strength and improving fertility in brood bitches and stud dogs.

### QUICK REFERENCE GUIDE

#### INDICATIONS:

- Natural Vitamin E additive for greyhounds to be used in all cases of Vitamin E deficiency

#### RECOMMENDED FOR:

- Nervy dogs
- Dogs prone to cramping
- Muscle strength and stamina
- Strengthening the immune system
- Improving fertility in brood bitches and stud dogs

#### PRESENTATION:

160g, 500g, 1.5kg and 8kg packs  
(500g, 1.5kg & 8kg feature a horse picture but are registered for greyhounds)

#### COMPOSITION:

- Each 3.2g dose contains:  
200 I.U of Vitamin E (d-alpha-tocopheryl acid succinate)

#### DOSAGE & DIRECTIONS:

- Iron is a known antagonist of Vitamin E: therefore when giving any supplement containing iron, WHITE-E should be given in the morning feed and the iron supplement in the evening feed (or on alternate days)

- DOSE: Measure with enclosed scoop in pack and mix with food.
- 1 scoopful = 3.2g = 165.2mg (200 I.U) Vitamin E
- TRAINING: 1/4 scoopful daily (50 I.U)
- RACING: 1/2 scoopful daily (100 I.U)
- PRE-RACE: 2 days prior to racing: 1 scoopful daily (200 I.U) for 2 days, including race day.

**To obtain the best benefit from White-E the following rules should be observed.**

1. When introducing White-E to the diet, for the first time in racing greyhounds, commence on a lower dose of 25 I.U daily for 7-10 days, then increase to 50 I.U daily for 7-10 days, then increase to 100-200 I.U as the routine daily dose. Sudden high dosage given to a greyhound on a relatively low Vitamin E diet, can result in symptoms of lethargy and reduced performance.
2. Supplement 100-200 I.U WHITE-E on a daily basis, particularly to greyhounds that are racing regularly.
